

Dear Potential Customer,

A price list is provided below for our current and upcoming GIS data products single-user licensing fees. If you need an actual quote, let us know the specific combinations of products that interest you and one will be drafted and sent to you.

Shorelines, Boundaries, Elevation, and Bathymetry are a combination of attributed GIS line and polygon layers. All other GIS databases are either attributed line or attributed point layers.

Please note that at this time the Global Maritime Boundaries Database requires annual renewal to allow ongoing use. The annual license subscription includes 2 edition updates per year of this dynamic dataset. In the first year there are actually 3 editions shipped since the current edition is shipped at the time of the order and two updates follow later. All other products are a one-time fee product. In the future, we hope to be offering annual maintenance that customers have requested for other databases such as the Wrecks Database (GMWD).

We are also excited about the recently completed **Marine Scientific Research Application tool (MSR-APP)**. The MSR-APP works with the GMBD to generate a U.S. State Department "Application for Consent to Conduct Marine Scientific Research in Areas Under National Jurisdiction of <Country A>".

Essentially, all trackline or activity points in a user provided GIS layer (point or line features) are compared to the GMBD. In a matter of seconds, a graphic and list of coordinates are inserted into MSR Application documents for each country within whose waters an organization's operations are planned. A template "Application" is provided with the MSR-APP. The user can include general operation specific boilerplate text in the provided template which will then be propagated to each country's resultant MSR Application. The user can then modify the resultant documents to include the required country specific text as well.

The MSR-BIN bins the data that result from an at-sea research operation for dissemination to the appropriate countries from which they were collected.

Please let us know if you have any questions, comments or suggestions about any of our data products or services.

Sincerely

Lorin

Alpha Stage

Under Development

New

The number of shipments per year for the GMBD is based on whether your order is a renewal (which includes two editions) or an initial purchase (which includes the current edition plus 2 update editions – three editions total)

Duty Free Qualification

The Global GIS Data product line qualifies under the 1948 Agreement for Facilitating the International Circulation of Visual and Auditory Materials of an Educational, Scientific and Cultural Character (known as the Beirut Agreement).

The Agreement is an international collaborative effort to promote the free flow and exchange of certain audio-visual materials worldwide. The Agreement provides an exemption of import duties, import licenses, special taxes, quantitative restrictions and other restraints and costs on certain types of audiovisual materials.

On international shipments, your country's Value Added Tax (VAT) may be applicable and will be collected on delivery (COD) by UPS. ``
